ALUTECH

Motorized Screen Systems

They aren't just for garages any more!

Alutech United, Inc. has taken its expertise and experience in roll shutter manufacturing and coupled this with the latest innovations in sun control products in order to design the Zip Tex Motorized Solar and Insect Screen. Zip Tex is the ideal product to control the sun's heat, damaging rays and glare.

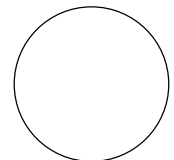

Motorized Screen Features and Benefits

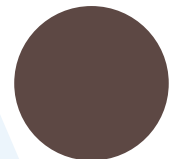

- Turns any outside area into a usable room: garages, patios, balconies, porches, gazebos, car ports or entry ways; also provides shading over windows
- Provides shading from the sun's harmful UV rays and reduces television screen and computer monitor glare
- Keeps out pesky insects
- Reduces air conditioning expenses by as much as 60%
- Enhances privacy but does not obstruct your view
- Sizes available 3 ft. to 19 ft. wide, up to 16 ft. tall
- Remote controlled for effortless operation with SOMFY motors and accessories
- Commercial, residential, and recessed designs
- Variety of screen types and color patterns from Mermet
- Hand held, decorative in wall, and key chain remotes available
- Optional accessories include security key pads, sun sensors, wind sensors, and timers
- Can be linked to many home automation systems
- Protects home furnishings from fading

Frame Colors Available

White

Brown

Beige

Zip Tex Screen Systems are ideal screen options for garages, but can also be used as an alternative to pool cages or fixed screen panels. The greatest feature of our motorized screens is that you can have a screen room when you want it and roll the screens up when you don't! They work particularly well in the transition area of your home. Save money over costly pool cages by avoiding new building codes and restrictions and separate insurance policies. Every Zip Tex Screen is built to order, and customized to fit your needs.

Enjoy protection from the sun's harmful rays and keep out pesky insects with Zip Tex motorized roll up screens. Spanning up to 19 ft. wide and 16 ft. tall, virtually any opening can be accommodated.

Any type of establishment can benefit from our residential, commercial, and recessed applications. Extruded aluminum components and stainless steel fasteners ensure receiving the highest quality product. Insect, solar, and privacy mesh along with a variety of popular colors make it easy to offer motorized units that are customized to fit all needs. The Zip Tex screen rolls into a small, virtually unnoticeable housing when not in use, and simply rolls down when you need its protection.

Ask about our other products:

Alu Star Shutter Systems

The Alu Star Shutter system is Alutech United's traditional rolling shutter that protects rectangular openings such as windows and doors. The Alu Star is quickly becoming the industry standard and the preferred brand of shutter for dealers throughout North America and the Caribbean. Alu Star shutters can be operated manually or automatically with the addition of a tubular motor.

Alu Star shutters come in 6 standard colors and can be constructed with roll formed foam filled slats or extruded aluminum slat profiles. Shutter widths, heights and local building codes determine which slat is required and the end user determines the method of operation. Each shutter is individually built to required dimensions from imported and domestic long foot materials. Alu Star shutter systems provide hurricane protection, sun control, noise control, energy savings and security all in one simple product.

Studio Star Shutters

Engineered shutter system that operates from the bottom up to cover shaped openings. Studio Star Shutters offer hurricane protection for your designer shaped windows.
